Geo-Technical Borings
Matagorda County, South Texas

Contract Value: \$603,000

Start Date:
October 2006

End Date:
January 2008

Project Reference:
MACTEC
Mike Hamlett
(704) 357-5507

Miller completed 30+ borings to depths ranging from 200-feet to 638-feet below ground surface. Borings were advanced utilizing mud rotary drilling technologies with split spoon samples, undisturbed soil samples (Shelby tubes) and Pitcher Tube Samples being collected at various intervals directed by the client ranging from top of borehole to 600-feet. Geologic conditions required the use HWT casing advance methods in some boring locations to keep boreholes open. Depths of boreholes and sampling interval depths required careful and meticulous mixing of drilling mud, polymers and other additives to ensure boreholes were completed to desired depths with accurate data being collected during borehole advancement.
